Waipahihi School

### *The NORRCOM Difference*

NORRCOM delivers solutions that are designed for our customers, by always making sure to talk and collaborate along the way. Understanding Waipahihi's simple requirements, we installed a server for network connectivity and migrated all existing site-data to the Cloud. We also provisioned an MDM for iPads that made best use of current iOS 9.3 feature sets. Waipahihi now has a simple-to-use and extremely cost-effective setup that suits and empowers them.

### *Why did you change your school's system?*

We wanted to reduce our ICT support hours and costs. We were using a high-powered server for on-site storage that needed regular maintenance, and instead wanted our resources going towards offering our students more learning opportunities.

### *What was NORRCOM's solution, and why?*

NORRCOM moved the majority of our system to the Cloud, which eliminated the need for our investment in local storage. It also transferred maintenance responsibility from the school to the host. NORRCOM then replaced the complicated server with a very capable low-cost one, and installed Lightspeed MDM (Mobile Device

Management). Now it only takes three clicks for our teachers to deploy new apps and updates across all devices.

### *Why is your school better off?*

Our system needs very little maintenance now. Not only is there less to go wrong, and the risk of major disruption or crashing far less likely, but we require only four hours of support per month. Often we use that to customise our software, and for day-to-day assistance and training for teachers – instead of hardware upkeep. With our simplified system, and partnership with NORRCOM, our teachers can manage and adapt our teaching technologies themselves, for the benefit of our students.

*Tim Lovelock – Principal*
